## CORS restrictions on internet-to-intranet connections.

[Security](#)

We'll begin requiring servers on a user's machine (127.0.0.1) or intranet (as defined by RFC1918) to explicitly opt-in...

## CSP 'navigate-to' directive

[Security](#)

The navigate-to directive restricts the URLs to which a document can initiate navigations by any means (a, form, wi...

## CSP3: unsafe-hashed-attributes

[Security](#)

'unsafe-hashed-attributes' is a feature in CSP3 which allows developers to enable specific event handlers without n...

## CSP: Hardened `nonce` content attribute.

[DOM](#)

We've seen some recent attacks on CSP which rely on the ability to exfiltrate nonce data via various mechanisms t...

## CSP: `script-src-attr`, `script-src-elem`, `style-src-attr`, `style-src-elem` directives

[Security](#)

These 4 new directives provide the functionality of the script/style directive but with more granularity, applying to ele...

## CSS Box Alignment

[CSS](#)

CSS properties for aligning boxes within their container. Allows for true vertical centering among other features.

## CSS Layout API (Houdini)

[Houdini](#)

The CSS Layout API defines a new callback which is designed to allow developers to create additional layouts algo...

## CSS Properties and Values API Level 1 (Houdini)

[Houdini](#)

The CSS Properties and Values API spec defines an registerProperty() function which can be called from JavaScript...

## Color Management in Canvas

[Graphics](#)

A set of new interfaces provides color management for canvas. This allows both developers and users to benefit fro...

## Consolidate standard and non-standard constraints under standard syntax

[Realtime / Communication](#)

This site is cached (1007KB). Ready to use offline!
